Threaded Connections/Cartridge Type/Gasket Mounting

Up to 14 MPa (2030 PSI), 50 L/min (13.2 U.S.GPM)

These valves are used for opening/closing the oil path by having the poppet valve operated with an electric signal via solenoid. Because these are of poppet type, the internal leakage is quite small and there is no worry about hydraulic lock.

★ The maximum flow means the limited flow without inducing any abnormality to the operation (changeover) of the valve.

- Because both AC and DC solenoids employ the plug-in type electrical wiring, the valve can be removed without removing the wiring.
- Being 50-60 Hz common service AC solenoids, do not require rewiring when the applied frequency is changed.
- K-Series DC Solenoid which has a reputation for excellent DC control is employed.

■ Instructions

● Direction of flow when the solenoid is energised

These valves do not allow flow from Y to X when the solenoid is energised.

● At the time of test run

At the time of test run, there is a possibility that the oil may not flow even after the solenoid is energised because of the residual air in the valve.

● Mounting

There are no mounting restrictions for any models.

■ Hydraulic Fluids

● Fluid Types

Any type of hydraulic fluids listed in the table below can be used.

Petroleum base oils	Use fluids equivalent to ISO VG 32 or VG46.
Synthetic fluids	Use phosphate ester or polyol ester fluid. When phosphate ester fluid is used, prefix "F-" to the model number because the special seals (fluororubber) are required to be used.
Water containing fluids	Use water-glycol fluids or W/O emulsion type fluids.

Note1: Water-glycol fluids cannot be used for CDST-03/03W and CDSG-03 valves.

2: For use with hydraulic fluids other than those listed above, please consult your Yuken representatives in advance.

● Recommended Viscosity and Oil Temperatures

Viscosity ranging between 15 - 400 mm²/s (77 - 1800 SSU)

Oil temperatures between -15/+70°C (5 - 158°F)

Use hydraulic fluids which satisfy the recommended viscosity and oil temperatures given above.

● Control of Contamination

Due caution must be paid to maintaining control over contamination of the hydraulic fluids which may otherwise lead to breakdowns and shorten the life of the valves. Please maintain the degree of contamination within NAS 1638-Grade 12. Use 25 μm or finer line filter.

■ Mounting Bolts

Mounting bolt in the table below is attached only for Gasket mounting type valve (CDSG-03).

CDSC-03 CDST-03 CDSG-03

CDST-03W

Note: Measuring has been made for the CDSC-03 (Cartridge type) when it is equipped with the same body as the threaded connections and the gasket mounting type.

- For any other viscosity, multiply the factors in the table below.

Viscosity	mm ² /s	15	20	30	40	50	60	70	80	90	100
	SSU	77	98	141	186	232	278	324	371	417	464
Factor		0.81	0.87	0.96	1.03	1.09	1.14	1.19	1.23	1.27	1.30

- For any other specific gravity (G'), the pressure drop(ΔP') may be obtained from the formula below.

$$\Delta P' = \Delta P (G'/0.850)$$

How to Mount

When mounting, the following steps must be followed:

1. Loosen the nut, then remove the coil.
2. Thread the cartridge, making sure that the collar 35 (1.38) Dia. of the cartridge is well fitted to the component surface (A) (surface in the left drawing).
Attach the coil and secure it with a nut.
- 3.

Note: The fitting portion of O-rings should have a good machined finish.

WARNING

Before maintenance or removal, do the following. Failure to do these may cause components to move, causing oil leakage or serious accidents.

- Shut off the equipment's power supply, and be sure that all electric motors and engines have stopped.
- Release pressure in all hydraulic systems to zero.

Interchangeability

■ Interchangeability between Old and New Design

Because of solenoid assembly improvements, CDS* -03* has been model-changed (design 20 to design 21).

● Specifications and Characteristics

There are no changes in the specifications and characteristics of the valves themselves.

● Solenoid Ratings

There are changes in the inrush current, holding current and power as shown below. No other changes.

● Interchangeability in Installation

● AC Solenoids

Most items of mounting are interchangeable except the dimensions as shown below. In addition, the size of the spanner (core end faces) for locking the CDSC cartridges has been changed to 15-19 mm across flats.

● DC/R Type Solenoids

Most items of mounting are interchangeable except the dimensions as shown below. The solenoid shape changed from circular to hexagonal. No change in the size 15 mm of the spanner for locking cartridges.

Note: The above drawings give illustrations for the cartridge type. The dimension (A) at the mounting section remains unchanged. In case of the Thread Connection Type and Gasket Mounting Type, a body is mounted to the hatched section. The dimensions of the body remain unchanged.
